Education

The Ohio State University — Columbus, OH
Bachelor of Science in Data Analytics — *Expected December 2027*

Experience

Software Engineer Intern — August 2026 – Current
Wahed Invest, Private Markets — *London, UK (Remote)*

- Built iwaqf.io, a full-stack endowment platform managing £741K across 1,718 waqfs, engineering Stripe webhook processing and idempotent settlement systems across 22K+ transactions with Supabase and RLS-secured RPCs.
- Architected the backend for Wahed Private Markets, an extension of Wahed's platforms serving 400,000+ investors, designing PostgreSQL schemas and Row-Level Security for deposit and redemption flows.

Data Science Intern — February 2026 – July 2026
BMW Group Financial Services, IT Data/AI Engineering — *Columbus, OH*

- Saved 15+ hours weekly by engineering Request2PO, a Power Apps and SharePoint automation platform that centralized PO workflows, vendor routing, approvals, and status tracking across teams.
- Reduced projected operational costs by $400K+ annually by helping develop AI-driven insurance valuation and funding verification systems using VIN analysis, ID validation, and workflow automation.
- Built enterprise AI applications using GAIA, conversational AI systems, n8n, and AWS SageMaker pipelines to automate document search, dealer analytics, and scalable internal AI workflows.

Data Analytics Intern — September 2025 – January 2026
State of Ohio Department of Transportation, Rail Division — *Columbus, OH*

- Conducted a case study on ORDC workflow bottlenecks and built an AI assistant to automate repetitive tasks, streamline Salesforce reports, and centralize process guidance.
- Saved $20K+ annually by migrating forms and workflows into Salesforce, automating statewide rail reporting.
- Migrated 42 Salesforce workflows to Flow Builder and validated deployments in Sandbox environments.

Software Engineer Intern — June 2024 – August 2024
JPMorgan Chase & Co, Asset and Wealth Management — *Columbus, OH*

- Saved 10+ team hours weekly by designing and launching DocDoctor, an AWS-based Node.js/React.js platform that accelerated document retrieval through DynamoDB across 1M+ records.
- Reduced latency by 40% through refactoring data flows and integrating structured and unstructured data sources into React dashboards, improving accessibility for multiple engineering teams.
- Enhanced reliability with CI/CD (Git, Jenkins, Docker) and automated testing, quickening release times.

Projects

Swyft Payments | *(Co-founder) FinTech Startup to Improve Donations, www.paywithswyft.com*

- Invented a preset NFC tap-to-donate system, enabling 2-sec contributions and raising $30K+ from 2.5K+ donors.
- Scaled backend with C/C++ (Raspberry Pi), SQL, and WorldPay API to handle numerous nonprofit orgs.
- Built Tableau/Power BI dashboards, giving organizations real-time donor, compliance, and engagement insights.

PlanMyDegree | *Academic OSU Degree Planner*

- Collaborated in a team of 6 to build a full-stack web app using JavaScript, Python (Flask), HTML/CSS, and MySQL to streamline degree planning for 500+ OSU students.
- Added prerequisite validation, course lookup, and requirement tracking, boosting planning efficiency 40%.
- Designed backend analytics pipelines for degree comparison and progress visualization increasing user satisfaction.

Hope Labs | *AI Therapist & Research App, www.hopelabs.org*

- Built HOPE AI, a faith-informed mental health chatbot, improving access and engagement for 500+ users.
- Integrated APIs (Supabase, OpenAI) with multiagent workflows to enable supervised model collaboration.
- Collaborated on a 20-person mental health research initiative, running analyses to validate survey outcomes.

Technical Skills

Programming: Python (Flask, Pandas, NumPy), JavaScript (React.js, Node.js), Java, C++
Data Analysis: SQL, PostgreSQL, R, Tableau, PowerBI, Dataiku, SageMaker, SAS Viya
Systems & Tools: AWS, Git, Docker, Salesforce, Power Apps, Microsoft SQL Server, VS Code
